## SocketLabs Spotlight: Get Started Guide

Welcome to **SocketLabs Spotlight email analytics**! We're happy you're here.

Let's get your Mailgun data connected to our platform so you can get started.

Please complete the following steps:

First, click Configuration from the left-hand menu and select Connector Management.

	1	SocketLabs	
(III	ì	Account	
1 8	3	Configuration	Y
	1	P Pool Management	
	-	Subaccount Management	
	ł	Event Webhook	
	1	Api Key Manager	
	1	Advanced Authentication	_
Г	(	Connector Management	٦

Click Add Connector.

03

Select Mailgun, then add Account Name and Account ID. Click Save:

Provider Type	Maligun	Ψ.
Account Name	Zest Industries	
Maligun Account ID (Optional)	618424	
SuperTag Key (Optiona) 🕚		

Copy the Endpoint URL so you can add it to your Mailgun Account and click Save.

<ul> <li>Correctol Page</li> </ul>		
Edit a Co	nnector	
Provider Type	Malgun	
Account Name	Zest Industries	
Malgun Account ID	818424	
SuperTag Key (Optional) (0		
Endpoint Uit	https://guided-reporting-api.sockartabs.jo/v1/connector/malgury	C <sup>0</sup>

Now, we'll show you how to add your new Endpoint URL to your Mailgun account.

# Adding an Event Webhook in Mailgun

To get started using **SocketLabs Spotlight**, you first need to create webhooks within your Mailgun account.

To do so, you'll need to complete the following steps:

Log in to your Mailgun account and navigate to Sending > Webhooks

Select the appropriate domain from the dropdown, then hit the Add Webhook button.

Dashboard Reporting Sending	Webhooks	Domain mg example.com • Add webhook
Domains Overview Logs		Compared to get all HTTP polytosts that we send to your methods receivers. Once is out the documentation for more information.
Analytics Templates		Track events with webbooks
Suppressions Webhooks IPs Mailing lists	Add webhooks to your domains With Malgun, you can easily add an HTTP POST to your URLs to receive notifications on events linked to the messager you send.	Maligan can notify you of events by sending an HTTP request to a webhool: URL you effere. Webhoolis documentation How do webhoolis work?
Domain settings Receiving	Test webhook	Decug webness
Validations	Event type	User
	Delivered Messages •	Company
	URL to test	
	Test weblook	n 🔹 Add webhook

Select your first event type, then paste your Endpoint URL.

	New webhook		×	
	Event type			Track events
Δ.	Delivered Messages		-	Maigun ci
ith Maligur, you c	Accepted			webhook (
	Clicks			Webhooks
_	Spam Complaints			Debug wel
	Delivered Messages			
	Opens			
	Permanent Fallure			
	Temporary Failure		100	
	Unsubscribes	_		
	Unsubscribes	×		

04

Follow the same steps for all event types:

- Accepted •
- Clicks
- Spam Complaints
   Temporary Failure
- Delivered Messages
   Unsubscribes
- Opens
- Permanent Failure

05

When you've pasted your endpoints into all event types, your dashboard should look like the screen below and you are ready!
